## Education

2014 - 2019
**Mining Surveying**
**Silesian University of Technology**
*Master's Degree*

## Work Experience

2021 - Currently
**Land Surveyor Specialist**
**Asgeodezja Sp. z o. o. Mikołów**

2019 - 2021
**Land Surveyor**
**Land surveying services, Mikołów**

## Soft Skills

• Teamwork
• Problem solving
• Effective communication
• Good time management
• Attention to details
• Learning from mistakes
• Responsibility

## Languages

• Polish - native
• English – B2

## Interests

• Modern technologies
• Hiking
• Bushcraft
• Piano playing

## About me

I am an aspiring frontend junior developer who is disciplined, ambitious, hard-working, and ready to continuously expand my programming knowledge and further develop my skills. I have been learning programming for more than two years and have reached the point where my current goal is to get my first position as a frontend developer. My technological stack and skills enable me to apply for most positions at the 'junior' or 'intern' level – unfortunately I only lack commercial experience. My goal for the future is to evolve into a full-stack developer by enhancing my skills in database maintenance and backend development.

## Projects

### Portfolio – a simple portfolio page with more information about me
*Github: https://github.com/tomaszz95/mainsite        Live: https://tomaszzportfolio.vercel.app*

*This is a fully functional and responsive portfolio website, with more information about me, the projects I have created, the technologies I use and ways to contact me. Additionally, the website features a form that allows you to send me a message directly. More than 100 unit tests of varying complexity have been written for the website to check the correct behavior.*

*Stack: NextJS, React, Typescript, JEST / RTL, Tailwind, Git/Github, RWD, SEO, Accessibility.*

### Netflix clone – fully responsive website, which is an advanced clone of the popular streaming service Netflix, with many of its features
*Github: https://github.com/tomaszz95/Netflixclone        Live: https://nerflixcloneen.vercel.app*

*A website that is a 'clone of Netflix' – it is fully responsive, with best SEO and accessibility practices and with many features from the original streaming site. The application includes numerous sub-pages, ranging from the main view to the registration and login processes, profile selection and editing, as well as the main pages for series, movies, individual sub-pages, and search pages. This is my most significant and advanced project to date – the app is built with approximately 250 components and encompasses around 30 different subpages, including the dynamic ones.*

*Stack: NextJS, React, Typescript, Firebase, CSS, Git/Github, RWD, SEO, Accessibility.*

### Gradebook – an online app for students and teachers
*Github: https://github.com/tomaszz95/gradebook        Live: https://gradebookk.vercel.app*

*An application that partially mimics the operation of an electronic gradebook. The app enables you to check your timetable, grades, statistics related to the grades, and comparisons with other students/classes. As a teacher, you can add news and assign grades to individual students. It combines frontend with backend and retrieving data from databases.*

*Stack: NextJS, React, Typescript, Firebase, MongoDB, CSS, Git/Github, SEO, Accessibility.*

### Toolkit – a website with several apps: Todo List, Notes, Calculator, Financial management, Weather App
*Github: https://github.com/tomaszz95/toolkit        Live: https://toolkiit.netlify.app*

*A website with the most popular frontend projects written in React, using React Redux and React Router, as well as Local Storage. The page is fully responsive.*

*Stack: React, React Redux, CSS, Git/Github, RWD, SEO, Accessibility.*

## Tech Skills / Stack

• React / React Redux
• Typescript
• Tailwind
• JavaScript
• CSS / SCSS
• Git / Github

• NextJS
• React Testing Library / JEST
• Bootstrap
• MongoDB / Firebase
• HTML
• RWD, SEO
